OPERATING MANUAL & PLAYBOOK

GOLDSCALPERNINJA — TRADE MANAGER (MT5)

The complete 12-page desk operating manual for XAUUSD manual scalpers, semi-automated zone traders, and prop-firm desk operators. Master 1-click split-TP execution, institutional Volume Profile POC magnets, the 42-signal MTF trend matrix, Break-Even Lot recovery, Smart Shield defense, and 30-day Demo capital discipline.

"A good trading system is not one that never loses. It is one that loses only in the way you planned for."

PLATFORM: METATRADER 5 · PRIMARY ASSET: XAUUSD (GOLD) · ARCHITECTURE: 5-TAB COMMAND DECK · EDITION: 12-PAGE MASTER HANDBOOK

4 CORE DESK EXECUTION & SURVIVAL PILLARS

1. Precision Split-TP & Smart Partial Trimming

Project draggable Entry, Stop Loss, and 3 Take-Profit lines (**TP1**, **TP2**, **TP3**) directly onto your chart. See exact dollar loss at SL before entering, and shave partial volume from the heaviest losers or smallest winners first.

2. Institutional Volume Profile & Order Blocks

Map unmitigated Supply/Demand zones alongside the live session Point of Control (**POC**), Value Area High (**VAH**), and Value Area Low (**VAL**). Snap Take-Profit to the POC or place Value Area Limits in one click.

3. 42-Signal Multi-Timeframe Confluence Matrix

Scan 6 institutional engines (**Sonic R**, **Structure**, **SuperTrend**, **MACD**, **ADX**, **VOL-MOM**) across 7 timeframes (**M1**–**D1**) with equal-weight Buy/Sell Power percentages and chop guards.

4. Smart DCA, BE Lot, Zone Box & Smart Shield

Run Semi-Auto recovery inside a draggable Zone Box using either a Martingale Multiplier or dynamic Break-Even Lot calculator, backed by **MOBILE DCA** phone adoption and **SMART SHIELD** breakout hedging.

5-TAB COMMAND DECK ARCHITECTURE AT A GLANCE

TAB	WORKSPACE	PRIMARY DESK ROLE	SIGNATURE 1-CLICK CONTROLS	MANUAL PAGE
TAB 1	TRADE	Manual Scalping, 3-Target Split & Partial Exit	**GET BUY/SELL**, **BUY/SELL NOW**, **SL -> BE**, **TP %**	Page 04
TAB 2	S&D ZONE	Supply/Demand Order Blocks & Volume Profile POC	**M1–H4**, **OB ON/OFF**, **SNAP TP TO POC**, **LIMIT AT VA**	Page 05
TAB 3	TREND	42-Signal Multi-Timeframe Confluence Matrix	**CURRENT BIAS**, **BUY/SELL POWER %**, **DAILY TREND**	Page 06
TAB 4	SEMI	Smart DCA, BE Lot, Zone Box & Smart Shield	**MODE: BE LOT**, **MOBILE DCA**, **TRADE BY ZONE**, **SMART SHIELD**	Page 07
TAB 5	SYNC	Manual-Only Cloud Trade Audit & Capital Check	**CONNECT**, **Today / Entire History**, **Sync Selected Range**	Page 08

YOUR GUIDE ON THIS JOURNEY

This manual is written as a practical desk course, not a dry lookup table. Every button and setting is explained by **why it exists** before we discuss **what value to use**. All settings are referred to by the exact English label shown on the panel or in the MT5 **F7** Inputs window.

How Pips & Points Work on Gold: On most brokers quoting **XAUUSD** with 2 decimals, **10 pips = 100 points = $1.00 USD** of Gold price movement (for example, **4,150.00** to **4,151.00**). A 30-pip DCA Step equals **$3.00 USD** of Gold price.

MASTER TABLE OF CONTENTS (12 PAGES)

Part I · Mindset & Survival Math	3 Retail Mistakes & 3 Numbers That Decide Survival	**P. 03**
Part II · The 5-Tab Command Deck	Tab 1 (**TRADE**), Tab 2 (**S&D**), Tab 3 (**TREND**), Tab 4 (**SEMI**)	**P. 04–07**
Part III · Cloud Sync & F7 Inputs	Tab 5 (**SYNC**) Manual Audit & Plain-Language F7 Table	**P. 08**
Part IV · Execution Playbooks	Dual-Track BUY & SELL Playbooks + Killzone Hours	**P. 09**
Part V · Capital & Demo Practice	5 Golden Rules, 3 Demo Configs & 30-Day Roadmap	**P. 10–11**
Part VI · Troubleshooting & Risk	10 Common Situations, 4 Fatal Mistakes & Disclaimer	**P. 12**

FOUR CALLOUT SYMBOLS USED IN THIS MANUAL & "ONLY HAVE TEN MINUTES?"

✓ Recommended
Safe Default Choice: Tested settings suited for newcomers and Demo practice.

i Explanation
How It Works Inside: Background mechanics explaining why a feature exists.

★ Pro tip
Desk Experience: Practical nuances gathered from real XAUUSD sessions.

! Warning
Where Accounts Die: High-risk boundaries that require strict discipline.

P. 03 · Survival Math
Depth of tolerance, Lot Ladder comparison, and Combined Breakeven math.

P. 07 · Semi-Auto & Shield
BE Lot recovery, Zone Box boundaries, and Smart Shield breakout defense.

P. 10 · 3 Demo Configs
Conservative, Balanced, and Active starting templates for a $2,000 Demo.

P. 11 · Pre-Live Checklist
The 30-day Demo roadmap and 10 boxes you must tick before trading real money.

LESSON 1 · INSTALLATION & LICENSE VERIFICATION IN TEN MINUTES (7 STEPS)

- **Step 1 · Copy the EA File:** In MT5, click **File -> Open Data Folder -> MQL5 -> Experts**. Paste the compiled EA file, then right-click **Expert Advisors** in the Navigator and select **Refresh**.
- **Step 2 · Allow WebRequest URLs:** Open **Tools -> Options -> Expert Advisors**. Tick **Allow Algorithmic Trading** and **Allow WebRequest for listed URL**, then add: **https://raw.githubusercontent.com/** and **https://api.github.com** (plus your dashboard URL if using Tab 5 **SYNC**).
- **Step 3 · Open an XAUUSD Chart:** Open a clean **XAUUSD** chart (**M5** or **M15** recommended). Keep one Trade Manager instance per symbol/Magic pair.
- **Step 4 · Attach to Chart:** Drag **GoldScalperNinja - TradeManager** onto the chart. In the **Common** tab, tick **Allow Algorithmic Trading**. In the **Inputs** tab, keep the defaults and click **OK**.
- **Step 5 · Turn On Algo Trading:** Confirm the **Algo Trading** button on the top MT5 toolbar is green.
- **Step 6 · Verify Panel & License:** Confirm all 5 tabs switch smoothly and no license warning pop-up appears.
- **Step 7 · Run on a 24/7 VPS:** Whenever you use **Tab 4 (SEMI)** DCA, **MOBILE DCA**, or **SMART SHIELD**, run MT5 on a 24/7 VPS close to your broker's server.

WHAT THE 3-TIER LICENSE ENGINE TELLS YOU

STATUS / STATE	PLAIN-LANGUAGE MEANING & WHAT TO DO
ACTIVE / VALID	Your MT5 account number is authorized via the primary server, GitHub backup list, or 72-hour signed local cache. All 5 tabs operate normally.
CHECKING... / CACHE GRACE	Verifying account credentials on startup or holding your valid session through a brief internet hiccup (72-hour offline grace window).
NOT REGISTERED / EXPIRED	This MT5 account number is not registered yet or its period has ended. Send your MT5 account number to **@GoldScalperNinja** on Telegram.
NETWORK ERROR / 4014	Temporary connection loss or missing WebRequest URL in Step 2. Open **Tools -> Options -> Expert Advisors** and add the required URLs.

✓ A license issue never abandons your open trades: Even if a license shows **EXPIRED** or **NETWORK ERROR**, the EA only blocks **new** initial entries. Existing open positions and active recovery baskets continue to be managed safely.

! BEFORE YOU READ ON, REMEMBER ONE THING: In manual scalping, your risk lives in the distance to your Stop Loss. In Semi-Auto DCA, your risk does not live in the first order — it lives in the **entire chain.** Every page of this manual teaches one skill: keeping your single trades and recovery chains inside the exact limits you planned before clicking BUY or SELL.

1.1. THE THREE RETAIL MISTAKES THAT BLOW UP GOLD ACCOUNTS

1. Split-Order & Lot Math Lag

Gold moves 30–50 pips in seconds during London and NY opens. Opening MT5's **F9** ticket window three separate times to scale out at **TP1**, **TP2**, and **TP3** or guessing lot size on a wide stop causes missed fills and oversized losses.

2. Entering in "No Man's Land"

Firing market orders in the middle of the daily range without checking where the institutional **Point of Control (POC)**, **Value Area High (VAH)**, or **Value Area Low (VAL)** sit turns execution into a coin flip.

3. Uncapped Martingale Chains

Averaging down manually without a minimum pip step, a hard lot cap, or a breakout hedge lets a 60-USD one-way Gold trend turn a **0.02** starter trade into a margin call.

1.2. LESSON 2 · THE THREE NUMBERS THAT DECIDE SURVIVAL (TAB 4: SEMI MATH)

A. Depth of Tolerance

Number of Orders × DCA Step. How far Gold can travel against your basket in USD before you hit your cap or Zone boundary. Gold regularly moves **$40 to $100+ USD** in a single week. If your chain only spans $15 USD, a normal trend wave will overrun it unless a Zone Brake or Smart Shield is active.

B. Total Open Lot

The cumulative volume held across all open layers. On a standard 100-oz Gold contract, **1.00 lot** means every **$1.00 USD** move in Gold equals **$100.00 USD** of floating P&L. Controlling total open lot via **Max Single Lot** and **Max Basket Lot** is what separates survival from liquidation.

C. Combined Breakeven

The volume-weighted average price of the basket (drawn as a Yellow Line on chart). Each new DCA order pulls the Combined TP line closer to current price so a modest pullback closes the whole basket in profit — but deeper chains carry heavier dollar exposure while waiting for that bounce.

A · DEPTH OF TOLERANCE IN NUMBERS (5, 10, 15 & 20 ORDERS IN GOLD USD)

DCA STEP (PIPS)	5 ORDERS	10 ORDERS	15 ORDERS	20 ORDERS (GOLD USD)	DESK CHARACTER & RECOMMENDED USE
20 Pips ($2.00 step)	100p ($10)	200p ($20)	300p ($30)	**400p (≈ $40.00 USD)**	Very dense: fast exits in quiet Asian/London ranges; requires strict Zone Box & Smart Shield.
30 Pips ($3.00 step)	150p ($15)	300p ($30)	450p ($45)	**600p (≈ $60.00 USD)**	Balanced intraday spacing: matches typical M15 Supply/Demand zone widths.
50 Pips ($5.00 step)	250p ($25)	500p ($50)	750p ($75)	**1,000p (≈ $100.00 USD)**	Conservative swing spacing: wide breathing room for volatile US session trends.

B · TOTAL OPEN LOT LADDER COMPARISON (0.01 SEED LOT · ORDER BY ORDER)

RECOVERY MODE / MULTIPLIER	ORDER #1	ORDER #2	ORDER #3	ORDER #5	ORDER #8	ORDER #10	ORDER #12	ORDER #15	RISK PROFILE
Martingale 1.2x (Order / Total)	0.01 / 0.01	0.01 / 0.02	0.01 / 0.03	0.02 / 0.07	0.04 / 0.16	0.05 / 0.25	0.07 / 0.38	**0.13 / 0.71**	GENTLE
Martingale 1.3x (Order / Total)	0.01 / 0.01	0.01 / 0.02	0.02 / 0.04	0.03 / 0.09	0.06 / 0.24	0.11 / 0.43	0.18 / 0.75	**0.39 / 1.67**	BALANCED
Martingale 1.5x (Order / Total)	0.01 / 0.01	0.02 / 0.03	0.02 / 0.05	0.05 / 0.13	0.17 / 0.49	0.38 / 1.13	0.86 / 2.57	**2.92 / 8.74**	NEEDS HARD CAPS!
MODE: BE LOT (30p Step / 60p Retrace)	0.01 / 0.01	0.01 / 0.02	0.01 / 0.03	0.01 / 0.05	0.06 / 0.18	0.13 / 0.40	0.30 / 0.90	**1.01 / 3.04**	MATH-OPTIMIZED

i Why BE Lot Mode is Smarter than Fixed 1.5x: In **MODE: BE LOT**, the **Multiplier** row becomes **BE Retrace Pips** and solves for the exact lot needed so that pullback brings the whole basket to breakeven + **$1.00**.

★ The Number That Matters Most on Demo: Do not write down how much profit Demo made this week. Write down the **deepest floating loss** and **largest total lot** your Demo ever touched.

2.1. TAB 1 (TRADE) — ANNOTATED VISUAL CALLOUT BREAKDOWN

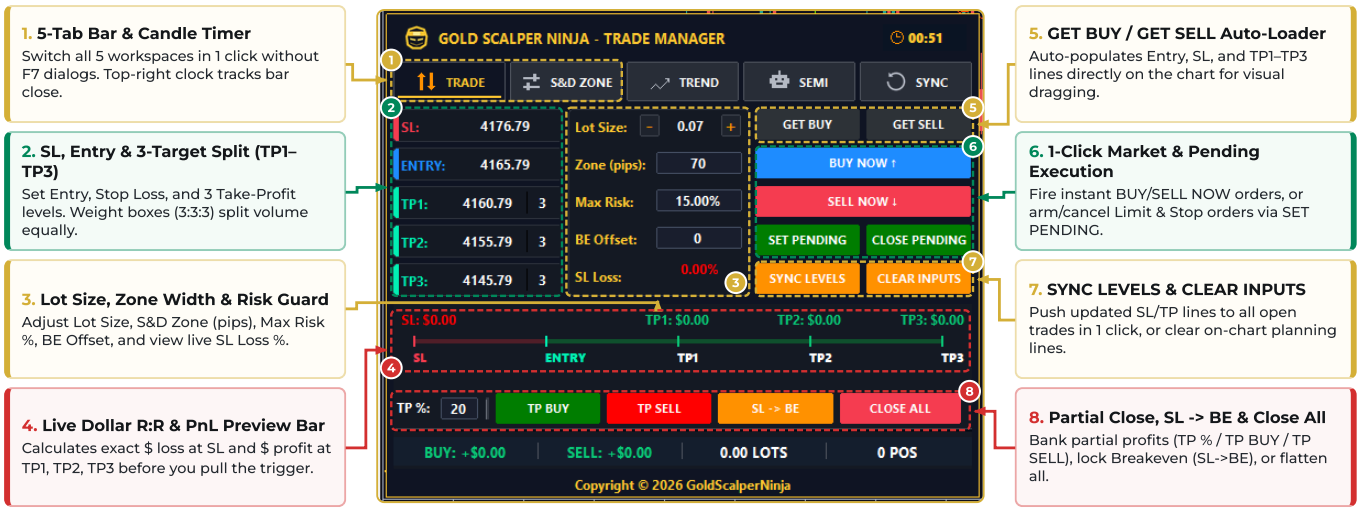

Figure 1: Tab 1 (TRADE) — 1-Click Manual Scalping, 3-Target Volume Split (TP1–TP3), Live Dollar R:R Slider & Smart Partial Close Deck

Left Callouts: Trade Planning & Risk Guard (1–4)

1. 5-Tab Navigation & Candle Timer: Switch instantaneously between **TRADE**, **S&D ZONE**, **TREND**, **SEMI**, and **SYNC**. The top-right countdown clock (**00:51**) shows the exact seconds remaining until the current candle closes.

2. SL, Entry & 3-Target Split (TP1–TP3): Define exact price levels for Stop Loss (**4176.79**), Entry (**4165.79**), and three Take-Profit targets (**TP1: 4160.79**, **TP2: 4155.79**, **TP3: 4145.79**). The weight boxes (**3 | 3 | 3**) divide your total lot into 3 proportional tickets (**33.3%** each). Set any weight box to **0** to disable that target.

3. Lot Size, Zone Width & Risk Guard: Step **Lot Size** (**0.07**) via **[-]/[+]**, set default planning **Zone (pips)** (**70**), enforce **Max Risk** (**15.00%**), set **BE Offset** (**0** pips), and audit live **SL Loss %** before firing.

4. Live Dollar R:R & PnL Preview Bar: Visual horizontal timeline showing exact dollar loss at **SL** and projected dollar profit at **TP1**, **TP2**, and **TP3** along the **SL — ENTRY — TP1 — TP2 — TP3** axis.

Right Callouts: 1-Click Execution & Live Exit Deck (5–8)

5. GET BUY / GET SELL On-Chart Lines: One click projects interactive horizontal lines for **ENTRY**, **SL**, **TP1**, **TP2**, and **TP3** onto your chart. Drag any line with your mouse and the panel prices and dollar R:R bar recalculate in real time.

6. 1-Click Market & Pending Execution: Click **BUY NOW ↑** or **SELL NOW ↓** to fire immediate market orders split across your TP weights. Click **SET PENDING** to place Limit or Stop orders automatically at your **ENTRY** line, or **CLOSE PENDING** to cancel all waiting orders.

7. SYNC LEVELS & CLEAR INPUTS: SYNC LEVELS pushes modified **SL** and **TP** prices to all currently open positions in one click. **CLEAR INPUTS** removes the planning lines from your chart and resets the price boxes.

8. Partial Close (TP %), SL -> BE & CLOSE ALL: Enter a percentage (e.g., **20%**) and click **TP BUY** or **TP SELL** to trim open exposure, click **SL -> BE** to move stops to Breakeven (**+ BE Offset**), or click **CLOSE ALL** to flatten every position.

2.2. INSIDE THE ENGINE · HOW SMART PARTIAL CLOSE & AUTO-BE PROTECT YOUR MARGIN

i How TP % Trims Positions: When you click **TP BUY** or **TP SELL** with **20%**, the engine sorts your open orders on that side by floating profit ascending and shaves volume starting from the **heaviest loser or smallest winner first**. This frees margin and reduces deep-zone drag while keeping your best runners alive.

✓ Auto-BE & Auto-Trail on TP1 / TP2: By default in **F7** Inputs, as soon as price hits your **TP1** ticket, the EA automatically moves the Stop Loss of your remaining **TP2** and **TP3** tickets to Breakeven and cancels leftover pending orders.

★ Keyboard Hotkeys for Speed: Enable hotkeys in **F7** to trigger instant desk actions directly from your keyboard: press **B** for **BUY NOW**, **S** for **SELL NOW**, **E** for **SL -> BE**, and **X** for **CLOSE ALL**.

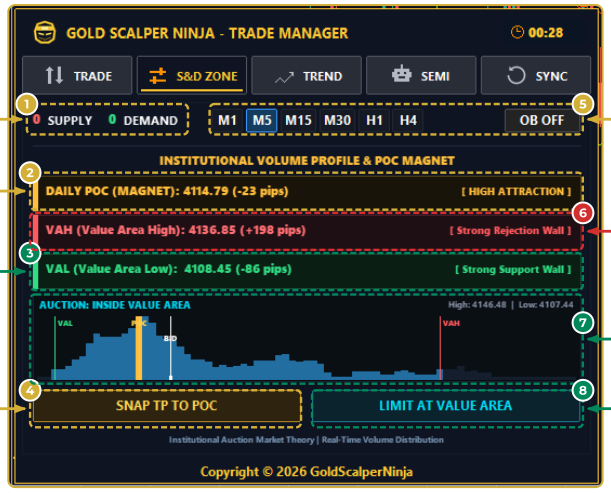

2.3. TAB 2 (S&D ZONE) — ANNOTATED VISUAL CALLOUT BREAKDOWN

1. Live Supply & Demand Zone Counter
Displays active unmitigated Supply (Red) and Demand (Green) zones on the selected TF.

2. Daily POC (Point of Control Magnet)
Highest institutional volume node of the day (4114.79, -23 pips) acting as a price magnet.

3. VAL (Value Area Low Support Wall)
Lower 70% institutional value boundary (4108.45, -86 pips) where buyers defend discount.

4. 1-Click SNAP TP TO POC
Instantly snaps your Take-Profit target on open trades and TP1 planner to the Daily POC.

5. MTF Zone Selector & OB Toggle
Scan M1 to H4 institutional structure in 1 click and toggle on-chart Order Block boxes.

6. VAH (Value Area High Rejection Wall)
Upper 70% institutional boundary (4136.85, +198 pips) acting as a premium supply ceiling.

7. Live Volume Profile Distribution Deck
Visual histogram mapping VAL, Golden POC bar, live BID line, and VAH in real time.

8. 1-Click LIMIT AT VALUE AREA
Deploys precision Buy Limit at VAL or Sell Limit at VAH with pre-configured risk settings.

Figure 2: Tab 2 (S&D ZONE) — Multi-Timeframe Supply/Demand Order Block Scanner, Daily POC Magnet, VAH/VAL Walls & 1-Click Value Area Execution

Left Callouts: Zones, POC Magnet & VAL Support (1–4)

1. Live Supply & Demand Counter: Displays the count of active, unmitigated institutional **SUPPLY** (red) and **DEMAND** (green) Order Block zones currently mapped on the selected timeframe.

2. Daily POC (Point of Control Magnet): Highlights the exact price level with the highest traded volume of the session (**4114.79**, **-23 pips** from current price, **[HIGH ATTRACTION]**). Inside balanced auctions, the POC acts as the primary gravitational magnet.

3. VAL (Value Area Low Support Wall): Marks the lower boundary of the institutional Value Area (**4108.45**, **-86 pips**, **[Strong Support Wall]**), where wholesale buyers step in to defend discount pricing.

4. 1-Click SNAP TP TO POC: Automatically assigns the Daily POC price (**4114.79**) as your **TP1** target and updates the Take-Profit of open positions so you bank profits right at the thickest volume node.

Right Callouts: MTF Scanner, VAH Wall & Histogram (5–8)

5. MTF Zone Selector (M1–H4) & OB ON/OFF: Switch the Supply & Demand scanner across **M1**, **M5**, **M15**, **M30**, **H1**, or **H4** in one click, and toggle on-chart Order Block rectangles via **OB ON** / **OB OFF**.

6. VAH (Value Area High Rejection Wall): Marks the upper boundary of the Value Area (**4136.85**, **+198 pips**, **[Strong Rejection Wall]**), acting as a heavy institutional supply ceiling for short fade setups.

7. Live Volume Profile Distribution Deck: Real-time horizontal volume histogram displaying current auction status (**AUCTION: INSIDE VALUE AREA**), session range (**High: 4146.48 | Low: 4107.44**), green **VAL** marker, golden **POC** peak, white live **BID** line, and red **VAH** marker.

8. 1-Click LIMIT AT VALUE AREA: Automatically deploys a precision **Buy Limit** order at **VAL** (**4108.45**) or **Sell Limit** order at **VAH** (**4136.85**) using your configured risk parameters.

2.4. AUCTION MARKET THEORY CHEAT SHEET · HOW TO TRADE POC, VAH & VAL

VOLUME PROFILE LEVEL	INSTITUTIONAL MEANING	BEST DESK ACTION
DAILY POC (MAGNET)	Fair-value price where the largest institutional volume transacted today.	**Use as your primary Take-Profit target** (click **SNAP TP TO POC**). Never open new trades right on top of the POC—wait for price to stretch away to VAL or VAH first.
VAL (SUPPORT WALL)	Bottom edge of the Value Area where Gold is at an institutional discount.	**Look for Long entries** when an unmitigated **M15/H1 DEMAND** zone overlaps **VAL**. Click **LIMIT AT VALUE AREA** and target the **DAILY POC** above.
VAH (REJECTION WALL)	Top edge of the Value Area where Gold is at an institutional premium.	**Look for Short entries** when an unmitigated **M15/H1 SUPPLY** zone overlaps **VAH**. Place stops above the Supply wick and ride mean-reversion back to **POC**.

★ **Golden Rule of Location:** An Order Block is twice as strong when it aligns with a Volume Profile wall. A **DEMAND** zone sitting directly on **VAL** gives you both structural support and institutional volume defense.

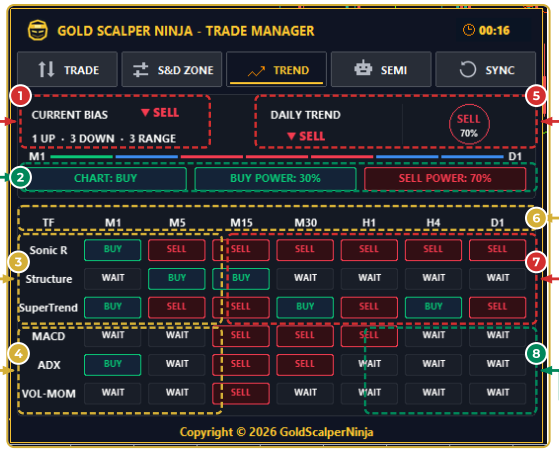

2.5. TAB 3 (TREND) — ANNOTATED VISUAL CALLOUT BREAKDOWN

1. Current Multi-TF Bias & Breakdown
Aggregates all 7 timeframes into a clear directional call (SELL: 1 UP, 3 DOWN, 3 RANGE).

2. Chart Signal & Buy/Sell Power Split
Compares active chart signal against overall bull/bear pressure (30% Buy vs 70% Sell).

3. Trend & Structure Rows (Top 3)
Sonic R EMA wave, Market Structure Break (BOS/CHoCH), and SuperTrend ATR trailing flip.

4. Momentum & Volume Rows (Bottom 3)
MACD histogram impulse, ADX trend strength filter, and VOL-MOM institutional participation.

5. Daily Master Trend & Dominance Gauge
Shows D1 macro bias (SELL) and circular confluence score (70%) so you never fight H1/D1.

6. 7-Timeframe Confluence Header
Visual M1-to-D1 column headers scanning scalping (M1–M15) to macro (H1–D1) alignment.

7. High-Probability Pro-Trend Alignment
Red SELL blocks aligned across M15, M30, and H1 confirm institutional downward pressure.

8. WAIT Filter (Chop & Low-Momentum Guard)
Dark WAIT cells warn when ADX/MACD lack directional strength — keep your hands off!

Figure 3: Tab 3 (TREND) — 42-Signal Multi-Timeframe Matrix (6 Indicators × 7 Timeframes), Equal-Weight Buy/Sell Power & Daily Trend Gauge

Callouts 1–4: Headline Bias, Power Split & 6 Indicator Rows

1. Current Multi-TF Bias & TF Breakdown: Summarizes all 7 timeframes into a single directional headline (**CURRENT BIAS: ▼ SELL** with **1 UP · 3 DOWN · 3 RANGE**).

2. Chart Signal & Equal-Weight Power Split: Shows the active chart's signal (**CHART: BUY**) alongside the overall multi-timeframe balance (**BUY POWER: 30%** vs. **SELL POWER: 70%**). Every one of the 42 cells (6 indicators × 7 timeframes) carries an **equal vote**: active **BUY** cells vs. active **SELL** cells determine the exact percentage split.

3. Top 3 Trend & Structure Rows: Tracks **Sonic R** (34/89 EMA Dragon trend ribbon), **Structure** (market swing BOS/CHoCH), and **SuperTrend** (ATR trailing volatility flip).

4. Bottom 3 Momentum & Volume Rows: Tracks **MACD** (impulse histogram), **ADX** (trend strength threshold), and **VOL-MOM** (volume-backed directional expansion).

Callouts 5–8: Daily Gauge, Spectrum & Chop Filter

5. Daily Master Trend & Dominance Gauge: Displays the macro **DAILY TREND** (**▼ SELL**) and circular dominance readout (**SELL 70%**). Never take full-size counter-trend scalps when Daily Dominance reaches **70%** or higher.

6. 7-Timeframe Confluence Spectrum (M1–D1): Scans scalping timeframes (**M1**, **M5**, **M15**), intraday structure (**M30**, **H1**), and macro trend (**H4**, **D1**) side by side.

7. Pro-Trend Institutional Alignment: Solid columns of red **SELL** (or green **BUY**) across **M15**, **M30**, and **H1** confirm strong multi-timeframe order flow.

8. WAIT Chop & Low-Momentum Guard: Grey **WAIT** cells mean ADX trend strength or momentum is flat. When **M5** and **M15** show 4+ **WAIT** cells, stay flat.

2.6. VECTOR HUD REFERENCE TABLE (SYNCED 1:1 WITH FIGURE 3 MATRIX)

INDICATOR ROW	WHAT IT MEASURES ON GOLD	M1	M5	M15	M30	H1	H4	D1
1. Sonic R	34/89 EMA Dragon Trend Ribbon	BUY	SELL	SELL	SELL	SELL	SELL	SELL
2. Structure	Swing High/Low Break of Structure	WAIT	BUY	BUY	WAIT	WAIT	WAIT	WAIT
3. SuperTrend	ATR Volatility Trailing Regime	BUY	SELL	SELL	BUY	SELL	BUY	SELL
4. MACD / 5. ADX / 6. VOL-MOM	Impulse, Trend Strength & Volume	ADX BUY	WAIT	ALL SELL	MACD/ADX	MACD SELL	WAIT	WAIT

★ **How Pros Trade Pullbacks Using Tab 3:** Look at Figure 3: **SELL POWER** dominates at **70%** and **Sonic R** is red from **M5** to **D1**, while **M1** and **M5/M15 Structure** print temporary green **BUY** cells. That short-term bounce into a Supply Zone is your exact institutional reload to sell with the dominant trend!

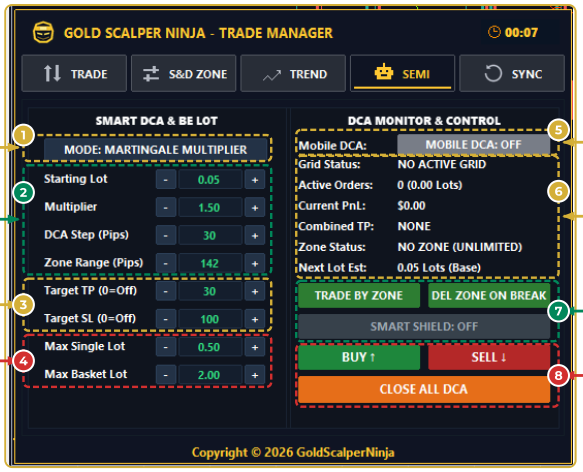

2.7. TAB 4 (SEMI) — ANNOTATED VISUAL CALLOUT BREAKDOWN

1. Dual DCA Recovery Mode Selector
Toggle between MARTINGALE MULTIPLIER (lot scaling) and BE LOT (exact breakeven recovery).

2. Starting Lot, Multiplier & Step Pips
Set seed volume (0.05), scaling multiplier (1.50x), minimum DCA step (30p), and Zone Range.

3. Combined Basket TP & Hard SL Pips
Auto-calculates a unified Take-Profit (30p) and emergency Stop-Loss (100p) for the basket.

4. Prop-Firm Lot Caps (Single & Basket)
Hard ceiling on any single recovery order (0.50 lot) and total basket exposure (2.00 lots).

5. MOBILE DCA Adoption (MT5 Phone Sync)
When ON, manual trades opened from your MT5 Mobile App are automatically managed by DCA!

6. Live Grid Telemetry & Next Lot Preview
Tracks Grid Status, Active Orders, Floating PnL, Combined TP price, and Next Lot Estimate.

7. Zone Execution & SMART SHIELD Guard
Draw interactive DCA Zone boxes, auto-cancel on breakout, or arm Smart Shield hedge stops.

8. Semi-Auto BUY / SELL & CLOSE ALL DCA
Launch a managed DCA sequence in 1 click or flatten the entire recovery basket immediately.

Figure 4: Tab 4 (SEMI) — Dual-Mode Recovery Engine (Martingale vs. BE Lot), Mobile Trade Adoption, Interactive Zone Box & Smart Shield Hedge

Left Callouts: Recovery Math & Lot Ceilings (1–4)

1. DCA Mode Toggle: Click to switch between **MODE: MARTINGALE MULTIPLIER** (scales each added order by your fixed **Multiplier**) and **MODE: BE LOT (RECOVERY)** (solves for the exact lot required so a pullback of **BE Retrace Pips** brings the basket to breakeven + **$1.00**).

2. Seed Lot, Multiplier / BE Retrace, Step & Zone: Set **Starting Lot** (**0.05**), **Multiplier** (**1.50**, or **BE Retrace Pips** when in BE Lot mode), **DCA Step (Pips)** (**30**), and **Zone Range (Pips)** (**142**).

3. Combined Target TP & Catastrophe SL: Target TP (0=Off) (**30** pips) continuously updates a unified Take-Profit across all open DCA orders. **Target SL (0=Off)** (**100** pips) places a hard emergency stop from the initial entry.

4. Mandatory Lot Caps: Max Single Lot (**0.50**) caps any single order; **Max Basket Lot** (**2.00**) stops adding new DCA orders once total open volume reaches your ceiling.

Right Callouts: Mobile DCA, Zone Box & Smart Shield (5–8)

5. MOBILE DCA: ON/OFF (Phone Trade Adoption): When switched ON, any manual trade you open on **XAUUSD** from the **MT5 Mobile App** on your phone is automatically adopted and managed by the Semi-Auto DCA engine on your VPS!

6. Live Grid Telemetry: Real-time readout of **Grid Status**, **Active Orders**, floating **Current PnL**, unified **Combined TP** price, **Zone Status**, and **Next Lot Est**.

7. TRADE BY ZONE, DEL ZONE ON BREAK & SMART SHIELD: Draw a draggable price box on the chart where DCA orders may fire, cancel the zone if price breaks out cleanly, or arm **SMART SHIELD: ON** protective breakout hedging.

8. BUY ↑, SELL ↓ & CLOSE ALL DCA: Start a managed Long or Short DCA chain in one click, or press **CLOSE ALL DCA** to flatten all Semi-Auto orders and pending shields immediately.

2.8. STEP-BY-STEP MECHANICS · ZONE BOX, COMBINED TP LINE & SMART SHIELD DEFENSE

1. Interactive Zone Box

Click **TRADE BY ZONE** to draw a draggable zone rectangle on your chart. DCA averaging orders are only permitted **inside** the Zone boundaries. If you drag the top or bottom border of the Zone Box on the chart, the EA updates the active zone and adjusts any waiting shield order automatically.

2. Yellow Combined TP / BE Line

Whenever 1 or more DCA orders are open, the EA draws a **Yellow Horizontal Line** showing your exact volume-weighted basket target. For a one-way basket, it marks average entry + **Target TP** pips. When a two-way hedged basket is active, it marks the exact Combined Breakeven price.

3. How Smart Shield Saves Baskets

When **SMART SHIELD: ON** is active with a Zone Box, the EA places a protective opposite Stop order at the outer edge of the Zone to lock your net exposure if price breaks out. Once hedged or in two-way recovery, the EA closes the **entire BUY + SELL basket** the instant net profit reaches **+$1.00 USD** (including spread, swap, and commission).

2.9. TAB 5 (SYNC) — ON-DEMAND CLOUD TELEMETRY & MANUAL DEAL AUDIT

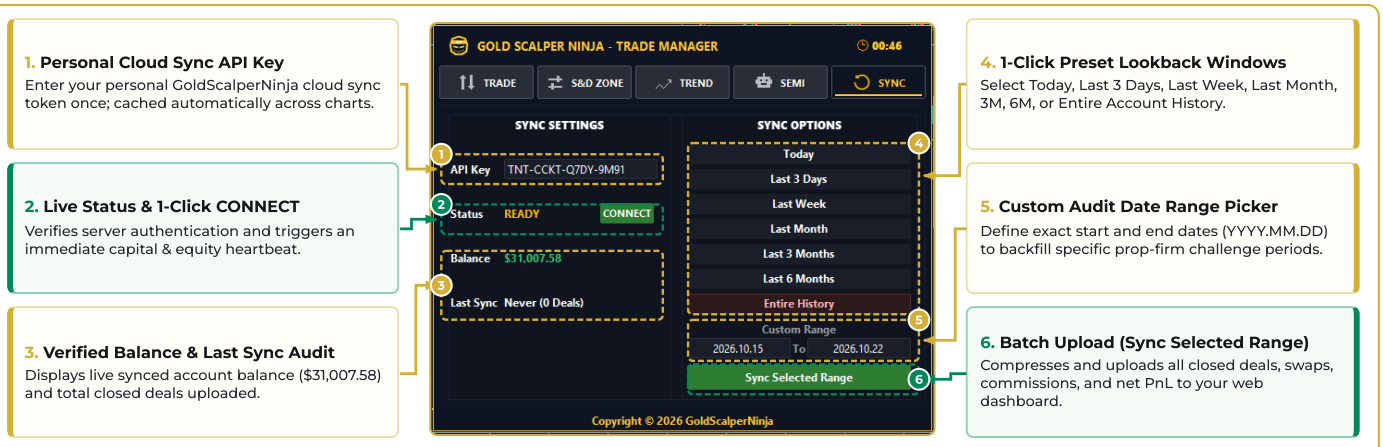

Figure 5: Tab 5 (SYNC) — Cached Personal API Key, On-Demand CONNECT Check & Manual-Only Historical Deal Synchronization

1. Personal Cloud Sync API Key: Enter your dashboard token (**TNT-CCKT-Q7DY-9M91**). Cached automatically across all charts on your terminal.

2. On-Demand CONNECT Button: Verifies your API key and sends an immediate account balance/equity check when clicked. Real accounts require a minimum balance of **$200 USD** (Demo accounts have no balance minimum).

3. Verified Balance & Last Sync Readout: Displays live account capital (**$31,007.58**) and the timestamp/count of your last manual upload.

4. 7 Preset History Buttons: Click **Today**, **Last 3 Days**, **Last Week**, **Last Month**, **3 Months**, **6 Months**, or **Entire History** to sync closed deals on demand.

5. & **6. Custom Date Range & Sync Selected Range:** Pick exact dates and upload in one click.

i 100% Manual-Only Trade Sync: Closed trades are uploaded **only when you click one of the 8 sync buttons** on Tab 5—never in the background during fast scalping ticks, guaranteeing zero chart lag.

PART III · INPUT SETTINGS (PRESS F7 ON CHART) — PLAIN-LANGUAGE REFERENCE

LABEL IN F7 SETTINGS WINDOW	PLAIN-LANGUAGE EXPLANATION (WHY IT EXISTS & HOW IT WORKS)	DEFAULT
Enable Hotkeys (**B**, **S**, **X**, **E**)	Enables single-key keyboard shortcuts on the active chart: **B** = BUY NOW, **S** = SELL NOW, **X** = CLOSE ALL, **E** = Move SL to Breakeven.	**true**
Auto BE when TP1 hit	Automatically moves the Stop Loss of remaining open split tickets (**TP2**, **TP3**) to your entry price (+ **BE Offset**) as soon as **TP1** closes in profit.	**true**
Auto Close Pending Orders on TP1 hit	Automatically deletes any unfilled pending orders from the same setup once price reaches **TP1** so stale orders cannot fill late on a reversal.	**true**
Auto Move SL to TP1 when TP2 hit	When enabled, once price hits **TP2**, the Stop Loss of your final **TP3** runner is trailed up/down to the **TP1** price level to lock in guaranteed profit.	**false**
Enable Daily Trading Limits (**Max Loss / Gain %**)	Circuit breaker that tracks daily equity change from server midnight. Default thresholds are **2.0%** Max Daily Loss and **3.0%** Max Daily Gain when switched ON.	**false** (2% / 3%)
Enable Trail SL by Candle High/Low	Trails the Stop Loss of manual trades behind the previous closed candle's High/Low (**Lookback = 1**) plus a safety buffer (**Buffer = 3 pips**).	**false**
Enable Lock Profit (step trailing)	4-stage profit ratchet: at **+30p** locks **+10p**; at **+60p** locks **+30p**; at **+100p** locks **+60p**; at **+150p** locks **+100p**. Great for hands-free news runners.	**false**
Default SL / TP1 / TP2 / TP3 (pips)	Initial distance used when you click **GET BUY** or **GET SELL** on Tab 1 (**SL = 110p**, **TP1 = 50p**, **TP2 = 100p**, **TP3 = 200p**).	**110 / 50 / 100 / 200**
Semi Auto DCA: Magic Number vs. **Magic Number**	Keeps Semi-Auto DCA baskets (**123457**) completely separate from Tab 1 Manual Scalping orders (**123456**) so manual trims never interfere with DCA math.	**123457** / **123456**
Enable Trailing TP for Semi-Auto Grid	Instead of closing the DCA basket the instant it touches **Target TP**, trails the basket exit behind price by **Trailing Distance (5.0 pips)** to capture oversized bounces.	**false** (5.0p)

4.1. THE BUY EXECUTION PLAYBOOK (LONG SETUPS ON XAUUSD)

TRACK A · PRO-TREND INSTITUTIONAL BUY (TAB 1 MANUAL 3-TARGET SPLIT)

100% STANDARD RISK | TARGET: +50 TO +200 PIPS

- **Step 1 · Confluence Check (Tab 3: TREND):** Confirm **CURRENT BIAS: ▲ BUY**, **DAILY TREND: ▲ BUY**, and **BUY POWER >= 65%** with green **BUY** blocks aligned on **M15** and **H1** across **Sonic R** and **SuperTrend**.
- **Step 2 · Institutional Location (Tab 2: S&D ZONE):** Wait for Gold to pull back into an unmitigated **M5/M15 DEMAND** Order Block or test the **VAL (Value Area Low Support Wall)** below the **DAILY POC**.
- **Step 3 · Precision Split Entry (Tab 1: TRADE):** Click **GET BUY** (or **LIMIT AT VALUE AREA** on Tab 2). Drag **SL** 20–30 pips below the Demand zone low, check the Dollar R:R bar so **SL Loss % <= 1.0%**, set weights to **3 | 3 | 3**, and click **BUY NOW ↑** (or **SET PENDING**).
- **Step 4 · Risk-Free Runner Management:** When **TP1** closes the first third in profit, **Auto BE when TP1 hit** locks the remaining two tickets at Breakeven. Switch to **Tab 2** and click **SNAP TP TO POC** if the Daily POC sits overhead.

TRACK B · SEMI-AUTO DEMAND ZONE RECOVERY BUY (TAB 4 SMART DCA + SHIELD)

MANAGED ZONE DCA | TARGET: +30 PIPS COMBINED TP

- **Step 1 · Draw the Demand Zone Box (Tab 4: SEMI):** Click **TRADE BY ZONE** and drag the Zone Box across a major H1 Demand shelf or **VAL** support wall (**Zone Range: 120–150 pips**). Switch on **SMART SHIELD: ON**.
- **Step 2 · Set Recovery & Cap Parameters:** Select **MODE: BE LOT (RECOVERY)** (or **Multiplier: 1.30x**), **Starting Lot: 0.01–0.03**, **DCA Step: 30 pips**, **Target TP: 30 pips**, and lock **Max Single Lot** and **Max Basket Lot**.
- **Step 3 · Launch & Let the Yellow Line Work:** Click **BUY ↑**. If price dips inside the Demand zone, the EA adds orders at 30-pip steps and drags the yellow **Combined TP** line down so the first 30-pip bounce closes the entire basket in profit. If price crashes through the bottom of the Zone Box, **SMART SHIELD** fires a protective Sell Stop hedge and closes the whole basket at **+$1.00** net breakeven on the rebound.

4.2. THE SELL EXECUTION PLAYBOOK (SHORT SETUPS SYNCED TO FIGURES 1–3)

TRACK A · PRO-TREND INSTITUTIONAL SELL (SYNCED TO FIGURES 1–3)

100% STANDARD RISK | TARGET: +50 TO +200 PIPS

- **Step 1 · Macro Bearish Alignment (Tab 3: TREND):** Never sell at the bottom of a red flush candle. Wait until **CURRENT BIAS: ▼ SELL** and **DAILY TREND: ▼ SELL (70%)** align while M1/M5 prints a temporary counter-trend **BUY** bounce (as seen in Figure 3).
- **Step 2 · Premium Supply / VAH Wall (Tab 2: S&D ZONE):** Let price rally into an unmitigated **M15 SUPPLY** zone or the **VAH (Value Area High Rejection Wall: 4136.85)** while the **DAILY POC (4114.79)** magnet sits below.
- **Step 3 · 3-Target Short Execution (Tab 1: TRADE):** Click **GET SELL**. Place **ENTRY: 4165.79**, **SL: 4176.79** above the Supply wick, and stage **TP1: 4160.79**, **TP2: 4155.79**, and **TP3: 4145.79** with **3 | 3 | 3** weights. Click **SELL NOW ↓** or **SET PENDING**.

TRACK B · COUNTER-TREND VAH REJECTION & POC MAGNET SCALP

50% HALF LOT RISK | TARGET: DAILY POC MAGNET (4114.79)

- **1-Click Value Area Fade:** When Gold spikes into **VAH (4136.85, +198 pips)** while **Tab 2** shows **DAILY POC: 4114.79 [HIGH ATTRACTION]** below, use **50% of your normal lot size** and click **LIMIT AT VALUE AREA** on Tab 2. At **+25 pips** profit, click **SL -> BE** on Tab 1 and **SNAP TP TO POC** on Tab 2.

4.3. BEST HOURS TO TRADE GOLD (UTC & EST) VS. NO-TRADE FILTER

PRIME INSTITUTIONAL KILLZONES (GREEN LIGHT)

- **London Open Killzone (07:00 – 10:00 UTC | 02:00 – 05:00 EST):** Cleanest Order Block breakouts and Pro-Trend 3-Target splits.
- **NY Open & Overlap (12:30 – 16:00 UTC | 07:30 – 11:00 EST):** Highest volume expansion and fastest mean-reversion moves back to the **DAILY POC**.

NO-TRADE FILTER (WHEN TO SIT ON YOUR HANDS)

- **Rollover Spread Window (21:00 – 01:00 UTC | 16:00 – 20:00 EST):** Broker spreads widen 3x–5x; never start new DCA baskets during rollover.
- **Red-Folder US News (CPI, NFP, FOMC):** Lock **SL -> BE** 15 minutes before release and wait 15–30 minutes after the whip-saw settles.

5.1. FIVE GOLDEN RULES OF CAPITAL (READ BEFORE FUNDING A LIVE ACCOUNT)

4 WEEKS	24 / 7 VPS	2 CAPS SET	$0 ADDED
Minimum Demo practice before live money	Never run Semi-Auto DCA on a sleeping PC	Max Single Lot & Max Basket Lot locked	Never deposit funds to rescue a losing chain

- **Rule I · Demo First, Real Money Later:** Run the Trade Manager for at least **four weeks on Demo**, including at least one week with tier-1 US news (**NFP**, **CPI**, or **FOMC**). Record the **deepest floating loss** your Demo touched — that number, not your weekly gain, tells you how much capital your settings actually require.
- **Rule II · The Starting Lot Decides Survival:** Every layer in a Semi-Auto DCA basket grows from your **Starting Lot**. On a small account, a **0.01** starting lot buys you depth and survival; vanity starting lots buy margin calls.
- **Rule III · A Machine That Never Sleeps:** Home laptops go to sleep, reboot for Windows updates, and drop Wi-Fi. If you use **Tab 4 (SEMI)** DCA, **MOBILE DCA**, or **SMART SHIELD**, run MT5 on a 24/7 VPS close to your broker's server.
- **Rule IV · Do Not Panic-Close Single Legs of a Hedged Basket:** When **SMART SHIELD** or a DCA recovery basket is working toward the yellow **Combined TP / BE** line, manually closing only the winning leg leaves the losing leg naked. Use **CLOSE ALL DCA** if you want to exit the entire basket cleanly.
- **Rule V · Set Your Daily Limits & Never Deposit More Money to Rescue a Losing Chain:** Bad days are part of trading; only their size is up to you. Set your caps before entering, and **never deposit extra money to hold an uncapped losing chain** — adding funds only turns a small loss into a catastrophic loss.

5.2. THREE STARTING CONFIGURATIONS FOR DEMO ($2,000 SAMPLE BALANCE · XAUUSD)

Run these three profiles on Demo accounts to observe how spacing and lot math behave. Values assume a **$2,000 USD** balance on 2-decimal Gold:

SETTING / CONTROL (TAB 1, TAB 4 & F7)	CONSERVATIVE (SAFE START)	BALANCED (INTRADAY STANDARD)	ACTIVE (EXPERIENCED ONLY)
Tab 1 · Manual Scalp Total Lot & Split	**0.03 Lots** (**1 | 1 | 1** split)	**0.06 Lots** (**2 | 2 | 2** split)	**0.09 Lots** (**3 | 3 | 3** split)
Tab 1 · Default SL / TP1 / TP2 / TP3	**40p SL / 40p / 80p / 140p**	**50p SL / 50p / 100p / 180p**	**60p SL / 50p / 100p / 200p**
Tab 4 · DCA Recovery Mode	**MODE: BE LOT (RECOVERY)**	**MODE: BE LOT** or **1.25x Mult**	**MARTINGALE MULTIPLIER (1.35x)**
Tab 4 · Starting Lot Size	**0.01 Lots**	**0.02 Lots**	**0.03 Lots**
Tab 4 · DCA Step (Pips) & Zone Range	**40 Pips / 160 Pips Zone**	**30 Pips / 140 Pips Zone**	**25 Pips / 120 Pips Zone**
Tab 4 · Target TP / Target SL (Pips)	**30 Pips TP / 160 Pips SL**	**30 Pips TP / 150 Pips SL**	**25 Pips TP / 130 Pips SL**
Tab 4 · Max Single Lot / Max Basket Lot	**0.08 Single / 0.35 Basket**	**0.15 Single / 0.60 Basket**	**0.25 Single / 1.00 Basket**
Tab 4 · Trade By Zone & Smart Shield	**ON + SMART SHIELD: ON**	**ON + SMART SHIELD: ON**	**ON + SMART SHIELD: ON**
F7 · Daily Loss / Daily Gain Limit %	**ON · 2.0% Loss / 3.0% Gain**	**ON · 3.0% Loss / 4.0% Gain**	**ON · 5.0% Loss / 6.0% Gain**
What It Adds Up To (10-Order Depth & Max Lot)	**≈ $40 USD Depth · Max 0.35 Lot**	**≈ $30 USD Depth · Max 0.60 Lot**	**≈ $25 USD Depth · Max 1.00 Lot**

5.3. SCALING CHEAT SHEET ACROSS ACCOUNT SIZES ($1,000 TO $50,000)

✓ **If You Only Pick One Column:** Start with **CONSERVATIVE**. It gives you time to watch how **BE Lot**, the yellow **Combined TP** line, and **Smart Shield** behave on live Gold ticks.

i **How to Scale to Your Balance:** Scale **lot sizes and lot caps** proportionally with balance (**$1,000** = **×0.5**; **$10,000** = **×5**; **$50,000** = **×25**). **Never scale pip distances** — pips follow Gold's volatility, not your wallet.

! **Active Requires Hard Caps:** Never run the **ACTIVE** column with **Max Single Lot** or **Max Basket Lot** left at **0**. Those caps are what keep the basket inside margin limits.

5.4. THE 30-DAY DEMO ROADMAP FOR NEWCOMERS (FOUR WEEKS TO MASTERY)

1. Week 1 · Observe

Run Demo with the **Conservative** profile. Practice reading **Tab 2 (POC/VAH/VAL)** and **Tab 3 (TREND Power %)** before every entry. Each evening, log your deepest floating loss, largest open lot, and closed P&L.

2. Week 2 · Press All Buttons

Test every button across all 5 tabs on Demo: drag **GET BUY/SELL** lines, shave **20%** with **TP BUY/SELL**, snap TP to **POC**, draw a **TRADE BY ZONE** box, and adopt a test order from your phone via **MOBILE DCA**.

3. Week 3 · One Variable

Compare **MODE: BE LOT** against **MARTINGALE MULTIPLIER** or test **30p** vs. **40p** DCA Step. Change only **one setting at a time** — if you change four settings at once, you will never know which one helped.

4. Week 4 · Stress Test

Trade through a week with high-impact US news (**CPI**, **NFP**, or **FOMC**) and intentionally test a Zone breakout with **SMART SHIELD: ON** so you watch the hedge lock and close at **+$1.00** combined BE.

5.5. YOUR DEMO JOURNAL TEMPLATE (COPY THIS INTO YOUR TRADING NOTEBOOK)

DATE	DEEPEST LOSS	LARGEST LOT	MAX DD %	BASKETS CLOSED	NOTES (BIAS, LOCATION & LESSONS)
Day 04 (Sample)	**-$18.40**	**0.06 Lots**	**0.92%**	**3 Splits (+112p)**	SELL 70% at VAH 4136.85; Auto-BE locked TP2/TP3, snapped runner to POC.
Day 11 (Sample)	**-$64.20**	**0.19 Lots (4 DCA)**	**3.21%**	**1 Basket (+$14.50)**	H1 Demand + VAL Zone; BE Lot pulled Yellow Line down for 30p bounce exit.
Day 19 (Sample)	**-$92.00**	**0.35 Lots (Hedged)**	**4.60%**	**1 Shield (+$1.15)**	CPI spike broke Zone; Smart Shield locked exposure and closed at +$1.15 BE.

5.6. THE 10-POINT PRE-LIVE CHECKLIST (TICK ALL 10 BEFORE GOING LIVE)

1. **I ran Demo for at least 4 weeks and logged the deepest floating loss:** If that deepest loss is more than 25%–30% of my real account, my lot size is still too large.
2. **I calculated my 10-order Depth of Tolerance and Total Open Lot:** I compared my zone depth against a volatile $50+ USD Gold week (Page 03).
3. **I locked Max Single Lot and Max Basket Lot on Tab 4:** Neither cap is left at **0**. My maximum basket lot is well inside my margin ceiling.
4. **I configured a real catastrophe exit (Target SL or SMART SHIELD: ON):** I never run an uncapped DCA chain without a Zone Box or hard stop.
5. **I enabled Daily Trading Limits in F7 Inputs:** My daily max loss percentage is active so one bad session cannot snowball into a blown account.
6. **Every chart has its own unique Magic Numbers:** I verified that **Magic Number** (Tab 1) and **Semi Auto DCA: Magic Number** (Tab 4) do not conflict with any other EA.
7. **I pressed every button across all 5 tabs on Demo at least once:** Including **GET BUY/SELL**, **TP %**, **SL -> BE**, **SNAP TP TO POC**, and **CLOSE ALL DCA**.
8. **My MT5 runs on a 24/7 VPS and I tested MOBILE DCA from my phone:** I know how the EA adopts and manages phone trades before relying on it away from my desk.
9. **The panel is crisp, all WebRequest URLs are whitelisted, and License is valid:** Zero HTTP 4014 errors in the MT5 Experts log.
10. **I am starting my Real account with the smallest initial lot size (0.01):** Real spreads, slippage, and swap differ from Demo; I scale up only after 30 live days.

✓ **If You Can Tick All Ten:** You are ready to transition to a live account with conservative sizing. If you cannot tick all ten yet, Demo is not wasting your time — it is saving you tuition that the live Gold market would otherwise charge you.

6.1. TROUBLESHOOTING · TEN COMMON SITUATIONS & 1-MINUTE FIXES

WHAT YOU SEE ON SCREEN	MOST LIKELY CAUSE	WHAT TO DO (1-MINUTE FIX)
Clicking BUY NOW / SELL NOW does nothing	MT5 Algo Trading is off, or **Allow Algorithmic Trading** was not ticked when attaching.	Click the top **Algo Trading** toolbar button so it turns green; press **F7 -> Common -> tick Allow Algorithmic Trading**.
License pop-up says NOT REGISTERED	Your MT5 account number is not registered on the license server yet.	Send your MT5 account login number to official support at **https://t.me/GoldScalperNinja** for activation.
WebRequest Error 4014 in Experts tab	GitHub license URLs or Cloud Sync URL are missing from MT5's WebRequest whitelist.	Open **Tools -> Options -> Expert Advisors**, tick **Allow WebRequest**, and add **https://raw.githubusercontent.com/** and **https://api.github.com**.
Tab 2 (S&D ZONE) or Tab 3 shows waiting/empty cells	MT5 has not downloaded enough historical candles for higher timeframes (**H1/H4/D1**).	Click through **M15**, **H1**, **H4**, and **D1** once on your chart so MT5 fetches the history bars, then switch back.
Tab 4 DCA does not add the next recovery order	Price is outside your active **TRADE BY ZONE** box, or **Max Basket Lot** cap was reached.	Check **Zone Status** and **Active Lots** on Tab 4. Drag the Zone Box wider if desired or wait for price to re-enter the zone.
A Pending Stop order moves when I drag the Zone Box	**SMART SHIELD: ON** is active and keeps its protective hedge stop aligned with your Zone edge.	Normal behavior! The Smart Shield pending order automatically tracks the outer boundary of your draggable Zone Box.
Phone trade is not adopted by Tab 4 DCA	**MOBILE DCA** is set to **OFF**, or the trade was opened on a different symbol.	Switch **MOBILE DCA: ON** (green) on Tab 4 and ensure the mobile trade is placed on the exact same **XAUUSD** symbol.
Tab 5 CONNECT says $200 minimum balance required	Cloud telemetry enforces a **$200 USD** minimum balance gate on Real accounts.	Use a Demo account (no minimum balance limit) or a Real account with at least **$200 USD** balance.
Remaining split tickets closed their SL at entry	**Auto BE when TP1 hit** moved stops to Breakeven after **TP1** banked profit.	Working as designed to protect your trade. Set **Auto BE when TP1 hit = false** in **F7** if you prefer manual SL control.
Panel looks slightly soft or uses high CPU on an old VPS	Hardware rendering differences on low-spec virtual servers.	Press **F7 -> Inputs** and change **Text Quality** from **Auto** to **High Quality** (sharper) or **Low CPU** (faster VPS).

6.2. FOUR MISTAKES THAT END ACCOUNTS FASTEST

THE FATAL MISTAKE	WHAT HAPPENS NEXT (WHY ACCOUNTS BLOW UP)
1. Leaving Target SL = 0 with SMART SHIELD: OFF	Your DCA basket has no catastrophe brake. A single 80-USD macro Gold trend can stretch the chain until margin runs out.
2. Raising Multiplier to 1.8x–2.0x because orders 1–4 look small	Exponential math accelerates violently after order #8 (Page 03). Use **MODE: BE LOT** or keep multipliers at **1.20x–1.35x**.
3. Leaving Max Single Lot and Max Basket Lot uncapped (0)	Without hard volume ceilings, an extended chain keeps multiplying lot sizes right into a prop-firm daily drawdown breach.
4. Depositing extra money to hold a deep losing chain	A small-account loss becomes a life-savings loss. Always let your preset Stop Loss or Smart Shield do its job and start fresh tomorrow.

6.3. LEGAL, RISK & COMPLIANCE DISCLAIMER (SIX MANDATORY NOTICES)

1. Risk Warning: Trading spot Gold (**XAUUSD**), foreign exchange (**Forex**), and leveraged Contracts for Difference (**CFDs**) carries a high level of risk and can lead to the loss of all your invested capital. Only trade with money you can afford to lose.
2. Nature of This Document: This operating manual describes how **GoldScalperNinja - TradeManager** functions. It is strictly an educational and technical guide—not investment advice, not a financial recommendation, and not a promise of profit.
3. Past Results & Demo vs. Live Execution: Results observed on Demo accounts, backtests, or historical examples do not guarantee future live performance. Real market spreads, slippage, swap charges, and liquidity gaps during news releases can differ significantly from simulated environments.
4. Semi-Auto DCA, Multi-Lot & Smart Shield Systems: Semi-Auto DCA and Break-Even Lot modes open multiple orders with increasing volume. While Zone boundaries, Lot Caps, and Smart Shield hedges help control exposure, a severe market gap or broker execution delay can still cause substantial loss.
5. Your Sole Responsibility: You alone are responsible for choosing your lot sizes, risk limits, F7 settings, VPS uptime, and trading decisions. The developers and community accept zero liability for any direct or indirect trading losses.
6. Copyright & Licensing: This software and manual are the proprietary intellectual property of **GoldScalperNinja**. Licenses are granted per MT5 account. Unauthorized copying, redistribution, decompilation, or resale is strictly prohibited.
